# A Guide To Hematology In Dogs And Cats

## Synopsis

A Guide to Hematology is a valuable, hands-on, laboratory manual for the practitioner and technician. It provides step-by-step guidelines for the collection and processing of blood samples and interpretation of the hemogram. It also serves as a guide to patient assessment and treatment planning for all common hematological disorders and diseases in dogs and cats. Veterinarians are able to test comprehension of the material through case studies with self test questions. This guide is designed to work with all currently available blood analyzer systems, providing detailed guidelines for hemogram interpretation, identification of artifacts and false positive results. Basic science is limited to information that is needed by the individual performing the test and interpreting the results. This 264 page presentation boasts 178 full color images and has a lay flat binding for easy in lab reference. A Guide to Hematology in Dogs and Cats was designed for the practitioner and technician who incorporate hematology studies in the office setting and is an ideal clinic laboratory reference. Published by Teton New Media in the USA and distributed by CRC Press outside of North America.

## Customer Reviews

Dr. Alan H. Rebar is the Dean at Purdue University in the School of Veterinary Medicine. Dr. Peter S. MacWilliams is Professor of Clinical Pathology, at the University of Wisconsin School of Veterinary Medicine. His principal research interests are cytologic diagnosis of disease in domestic animals, application of laboratory tests to production enhancement, bone marrow responses to

systemic diseases in cattle. Dr. Bernard F. Feldman is Professor of Biomedicine and Pathology at the Virginia-Maryland College of Veterinary Medicine with extensive teaching and research responsibilities in Comparative Hematology and Transfusion Medicine. Dr. Fred L. Metzger founded and practices at the "Metzger Animal Hospital" at the State College in Pennsylvania. Dr. Roy V. H. Pollock is President of the Fort Hill Company in, Montchanin, Delaware.

As teacher of haematology to veterinary students, I find this book a valuable resource. It contains superb photographs and sufficient accompanying text to explain the key features of red blood cells, white blood cells and platelets. I cannot think of any dislikes about this book and I would recommend it as a valuable addition to a veterinary student's library as it is very reasonably priced.

This book was requested by my staff for reference in our lab. There are a few staff members who own this book and really like the way the information is presented and find it easy for looking things up. After we received this book, a staff member asked me where I got it from because it looked like it was just photocopied. I took a closer look and they were correct. Many of the page numbers are missing and on some pages the print from the text is cut off by the end of the page. Very poor print quality. The information is still there, it is just difficult to look up what you need when there are no page numbers.

This is an excellent and very practical reference book. The pictures are very good and help supplement the text. This book will help any veterinary practitioner do a better job with diagnosing and treating his or her patients.

This is a wonderful book. Very simple and to the point. Preceise. Case studies help put things in better perspective.
