101 Questions Your Brain Has Asked About Itself But Couldn't Answer...Until Now

Synopsis

What is the brain made of? Can a person live without a whole brain? Does watching violence on TV affect a person's behavior? Why can smells bring back memories? The answers to these puzzling questions?and 97 more?are revealed in this thought-provoking book about the brain. From basic information on how the brain works to more complex issues such as the nature of intelligence and the mystery of emotions, science expert Faith Hickman Brynie provides authoritative information about the center of our nervous system.

Customer Reviews

Grade 6-10-Beginning with "18 Questions That Should Come First," such as "Is a Headache Really a Brainache?" this volume answers basic inquiries about the brain's structure and function in a lively, sometimes humorous way. The question-and-answer format will hold readers' interest. The layout is uncluttered and easy on the eyes. In spite of the lighthearted approach, Brynie includes plenty of factual information and scientific background; she addresses topics such as the latest research on how drugs affect the brain, mental illness, epilepsy, and memory. Clear and helpful monochromatic diagrams punctuate the text, along with a few decorative black-and-white photos. A clear and lively addition that incorporates much of what scientists have learned about the brain in

I liked this book for the most part. The author does make gender wars observations that prevent me
from recommending it to young male readers. Anything positive and specific to their make up is
immediately qualified. I wish we could get away from this.
