Purchased for my geometry classroom. One student with IEP needed a modified geometry curriculum that allowed him to move at a completely individual pace. This worked. Student was placed in an outside classroom with another teacher for attendance reasons. This resource allowed the other teacher and I to be on the same page about what the student needed to do and help both the student and parent know exactly what was expected/taught. Student was enrolled in a technical program for 1/2 the day and the geometry curriculum in Contemporary's Number Power was a great supplement to what he already was learning. I love how the skills and word problems included are practical - like using triangles to determine the best kitchen layout. The included pretests, post-tests and multiple choice exam were extremely helpful; I used the open answer exam as a study guide for the multiple choice version. The workbook was great for initial instruction and initial practice. Cooperating teacher indicated that when used in this way the student still needed extra practice on the specific skills and, due to memory, needed a quiz on every section or basically daily. Saved me a ton of time creating a separate curriculum.

This is an excellent text booklet. I used it when teaching the GED class in Adult Basic Education. I am now retired and a bit rusty at my math skills. I am now reviewing the NP 2 page by page. Then I will review NP 3 (Algebra) then NP 4 (Geometry). These books give very clear instruction and provide lots of practice problems. As a teacher, I had access to several different math books. These are by far the best. The number power books with the grid on front are just the older issue. They are the same inside.

While studying for my GED, I hit a wall as books of math instruction for adults tended to gloss over fine details or even skip them entirely, apparently expecting me to already know things that I had never learned in the first place. I borrowed a copy of this book from the public library, desperate for a fresh teaching voice- and got what I needed. The book taught with such effective authority I bought a copy from to keep. Contemporary's Number Power 4 begins at the beginning, assuming nothing, and guides the student page by page from the most basic geometry concepts to multi-step problems involving solids. In other words: It actually teaches geometry. And if geometry has never felt relevant to you, in the back of the book are several real-life examples of geometry at work, including a piece on pouring the right amount of concrete for a handmade patio. If other geometry books leave you confused or with blank spaces in your knowledge, try this one. Excellent for both the adult student or the kid with homework.

Exactly what I was looking for to begin my journey with Geometry. It begins at the basics! I love it!

This series is my favorite all-time series of math books to use in tutoring adults for the GED. There are clear explanations for each step in learning and enough problems to challenge students on their comprehension of the material. I have recommended this series to several others who also tutor for the GED. I have been tutoring for 20+ years and have not found any other math series comparable to Number Power - for every phase of math needed for the GED. Nancy Ratliff

I purchased this for a student who was slightly ahead of the others and needed to move on. Since geometry is visual it helped her put her other math skills to good use in an area with some dimensionality -drawings are essential to grasping math concepts and show relationships between shapes and their mathematical foundation.

This book is great, Im planning on retaking the ASVAB for my military career. Its been about 15 years since I've opened up a math book of any kind. I have searched high and low for a good Geometry study guide. Let me tell you, this book is great for refamilirization. Explains in detail how to solve problems. For beginners its also great, easy to understand, and sets a solid foundation for those wishing to continue with their studies in math.J

Very disappointed....book has writing all over it
