Delavier won the French powerlifting title in 1988 and makes annual presentations on the sport applications of biomechanics at conferences in Switzerland. His teaching efforts have earned him the Grand Prix de Techniques et de Pédagogie Sportive. Delavier lives in Paris, France. In 1998 he won the Article of the Year Award at the Fourth Academy of Bodybuilding Fitness & Sports Awards in California. Gundill started weightlifting in 1983 in order to improve his rowing performance. Most of his training years were spent completing specific lifting programs in his home. As he gained muscle and refined his program, he began to learn more about physiology, anatomy, and biomechanics and started studying those subjects in medical journals. Since 1995 he has been writing about his discoveries in various bodybuilding and fitness magazines worldwide.

I thought it was more about anatomy. From the title I expected something like: which muscles are used when you kick high? which organs are affected when you take a punch? What happens with the arm if you receive an armbar? It is actually about physical preparation for martial arts, with some good pictures and some excellent illustrations (drawings). The name in french is even "Musculation pour le fight et les sports de combat" which can be translated as: "Strength Training for the fight and combat sports".

Good information on what muscles are used in different types of martial arts - from boxing, to kicking, to grappling. While the title says "anatomy": it should be marketed more as a training book - it has substantial details on resistance workout and exercises that benefit those various martial arts and even has them divided by beginner, intermediate and advanced students. Great book, but then Delaviers books are all great.
