Fishes Of The Sea: The North Atlantic And Mediterranean

Synopsis

This photographic and descriptive guide to the fish species that inhabit the North Atlantic and Mediterranean is unique in its emphasis on the appearance of marine fish in their natural habitats. It expands and recasts the Lythgoes' highly regarded first edition published two decades ago. In particular, all of the more than 200 color photographs are new, and most are accompanied by line drawings that emphasize distinctive traits. The fish are arranged by class, family, and species, and succinct descriptions give detailed information about anatomy, distribution, food, and breeding habits. Most of the photographs were taken underwater, providing valuable information on how the fish swims in nature, its true colors and pattern, and whether or not it is camouflaged against its natural background. The geographical area covered in the book includes the Atlantic coastal waters of the United States and Canada north of Chesapeake Bay; the Mediterranean; and from Gibraltar north to the Arctic, including all the coasts of Europe. John Lythgoe, a Senior Research Fellow at the University of Bristol, is an expert on the appearance and color of fish underwater. The section of the book on the gobies, a group of fish that are as difficult to study as they are interesting, has been contributed by Peter J. Miller. Gillian Lythgoe is a diver, photographer, and the future and managing director of Planet Earth Pictures, whose collection covers a wide range of natural history and environmental subjects.

Book Information

Hardcover: 256 pages

Publisher: The MIT Press; 1 edition (December 5, 1991)

Language: English

ISBN-10: 026212162X

ISBN-13: 978-0262121620

Product Dimensions: 10 x 7.8 x 1 inches

Shipping Weight: 2.2 pounds

Average Customer Review: 4.0 out of 5 stars 2 customer reviews

Best Sellers Rank: #2,198,310 in Books (See Top 100 in Books) #67 in Books > Science & Math > Nature & Ecology > Field Guides > Fish #1116 in Books > Science & Math > Biological Sciences > Animals > Fish & Sharks #14314 in Books > Science & Math > Nature & Ecology > Fauna

Customer Reviews

The reason I came to in the first place. This is an excellent guide. It is complete, a vast array of fish.

Information on identification, with (through still pictures) an idea how the fish look underwater. Also information on behaviour. The only minor point are the drawings. Although they are clear, they are quite dull (B+W) and when a key identification is a colour, well, that just doesn't work. A good idea would be to use arrows for key identification features (like in birdwatching-books). Recommended for cold water divers and other people with a biological interest.
